Supplementary Fig. 1. Receiver operating curves of serum galactomannan (GM) assay predicting probable or proven invasive pulmonary aspergillosis (IPA) in allogeneic hematopoietic stem cell transplant recipients receiving fluconazole (A) and micafungin (B) as primary antifungal prophylaxis. Abbreviation: AUROC, area under receiver operating curve.

Supplementary Fig. 2. Kaplan–Meier curve of cumulative incidence of invasive pulmonary aspergillosis (IPA) according to antifungal agents used as primary antifungal prophylaxis. A value was estimated using the log-rank test.
