Supplementary Fig. 1 The cytotoxicity effect of soyasaponin on RBL-2H3 cells.
RBL-2H3 cells were treated with compounds at various concentrations for 24 hr.
Cell viability was determined using the MTT assay. Each point represented the mean of the data from six replicates; with error bars representing the standard deviation. (A); soyasaponin Aa. (B); soyasaponin Ab. (C); soyasaponin βg. (D) soyasaponin DDMP. Data are expressed as mean±SD, where *p<0.05 was considered statistically significant.
