**Supplementary Fig. 1.** Sensitivity of *Pseudomonas syringae* pv. *tabaci 6605* WT and its mutant strains to several phytoalexins. Growth inhibition on plates with 5 µl of 500 µM capsidiol, debneyol and rishitin, and 10 mM capsidiol. Photographs were taken at 24 h after incubation.
Supplementary Fig. 2. Inoculation test. Tobacco seedlings were inoculated with WT, ΔmexB, ΔmexF and ΔmexBΔmexF strains with a bacterial concentration at OD$_{600} = 0.002$ and incubated at 23°C. Photographs taken 10 days post-infection (dpi) shows representative results.
